

Tamlyn Color Flashing

Inside Corner

Lap Siding and Panel Inside Corner

PRODUCT DETAIL

DESIGN FEATURES

Patented design authentically duplicates the look of a wood corner piece without the maintenance headaches. Prevents water penetration behind siding at inside corners, window boxouts, etc. Provides an excellent drainage plane not possible with usage of other corner alternatives to keep water out of the home, preventing mold/mildew problems.

INSTALLATION

Install after framing is complete and felt paper or other weather resistive barrier is installed. Start at highest point of inside corner, position product so it runs straight down wall. If seam occurs position the second piece under the first piece so water won't trap behind the wall. Install siding butting into inside corner. Outside legs are self-flashing; however, if additional moisture protection is felt necessary.

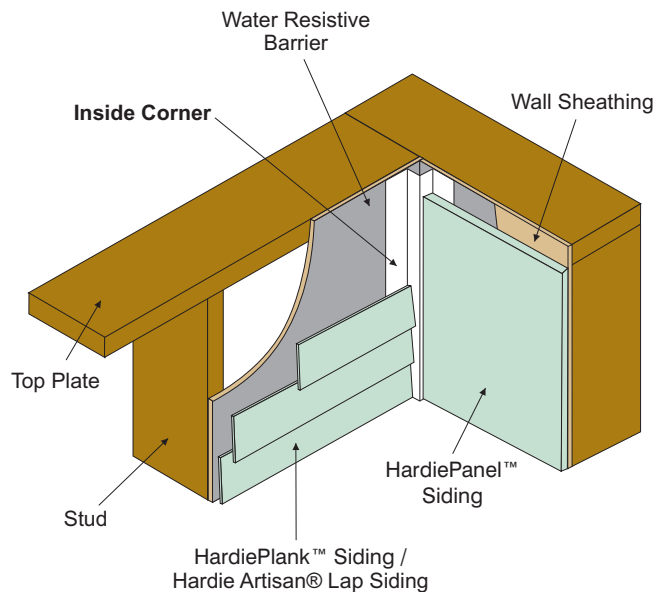

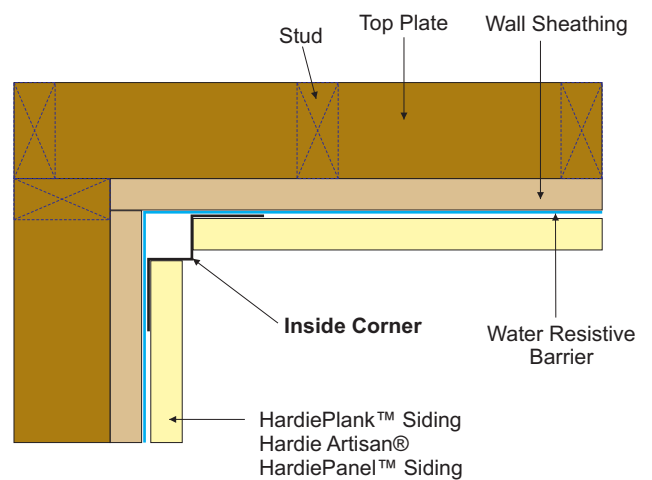

MATERIAL

3105-type aluminum sheet coated on both sides with Dymalar® 2000 paint system that is specifically formulated for residential exterior applications.

Standard colors shown below. Other colors available upon request.
